

Production Supporting Systems in Factories

ระบบสนับสนุนการผลิตในโรงงานอุตสาหกรรม

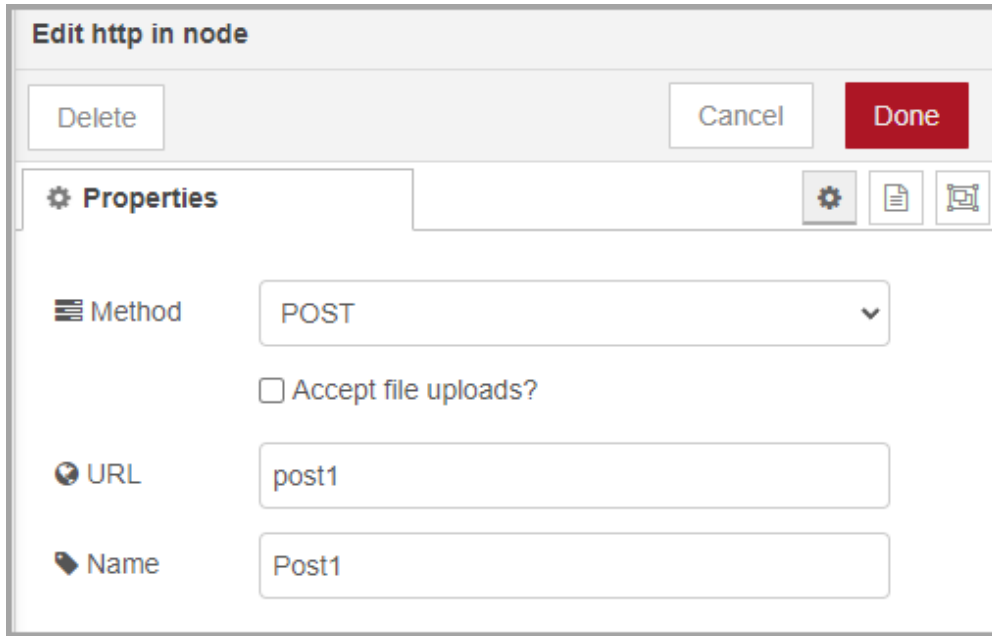

Module 2-1: HTTP POST Server

Server listening to **POST** requests

- Create a server that receives **POST** requests.
 - Flow

- http in node

The screenshot shows a dialog box titled "Edit http in node". At the top, there are three buttons: "Delete", "Cancel", and "Done". Below the buttons is a tabbed interface with a "Properties" tab selected. The "Properties" tab contains the following fields:

- Method:** A dropdown menu currently set to "POST".
- Accept file uploads?:** An unchecked checkbox.
- URL:** A text input field containing the text "post1".
- Name:** A text input field containing the text "Post1".

- Send the transformed message back.
- Try sending the post requests to your friends public address.

- **template node**

Send POST request from node-red

- Create a **post** request
 - Flow

- inject node

The screenshot shows a dialog box titled "Edit inject node". At the top, there are three buttons: "Delete", "Cancel", and "Done". Below the buttons is a section labeled "Properties" with a gear icon and three sub-icons (a gear, a document, and a monitor). Under "Properties", there is a "Name" field with a placeholder text "Name". Below the "Name" field, there are three rows of configuration for message properties. Each row has a label on the left, an equals sign, a dropdown menu, and a text input field. The first row is labeled "msg. payload" and has a dropdown menu with "a_z" and a text input field containing "I love you.". The second row is labeled "msg. topic" and has a dropdown menu with "a_z" and an empty text input field. The third row is labeled "msg. url" and has a dropdown menu with "a_z" and a text input field containing "http://localhost:1880/post1". Each row also has a small "x" icon to its right.

- Note: If there is a connection error, use `http://127.0.0.1:1880/post1`
 - What?

Send POST request from another program

Software

- Postman Desktop
- Chrome
 - Advancd REST Client
- Firefox
 - RESTClient

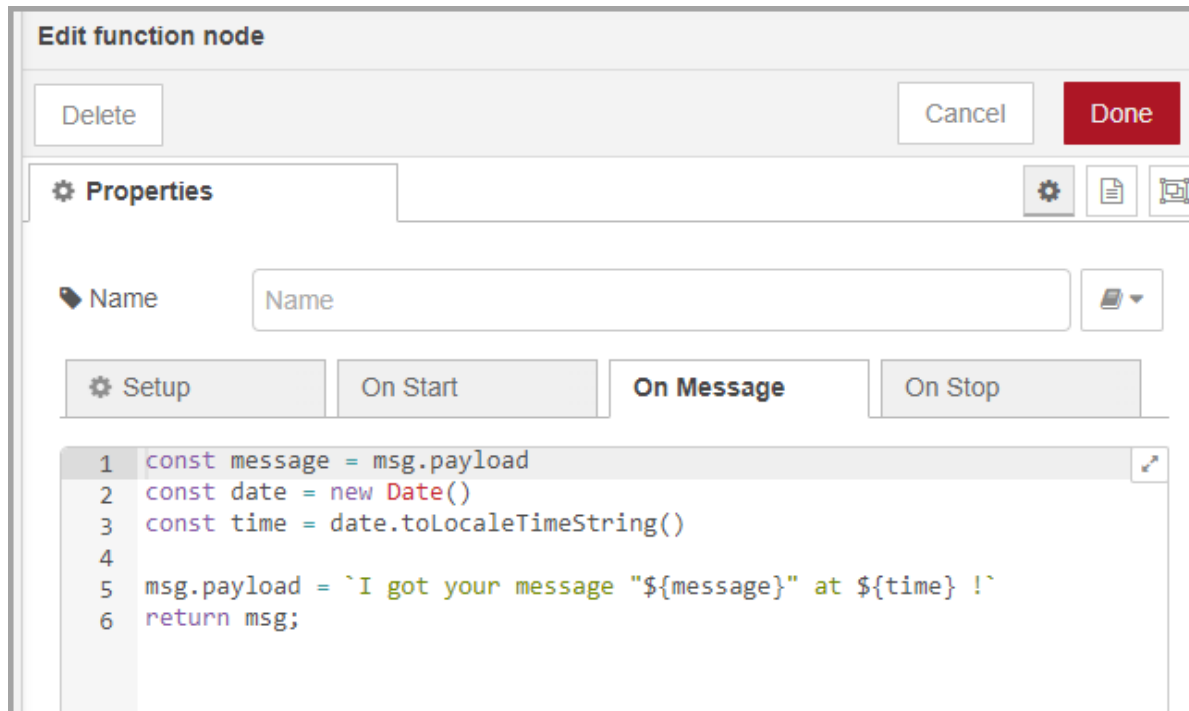

Serving dynamic content

- Create another url that response with dynamic content.
 - Flow

- `http in node`
 - `url = post2`

- function node

(code on the next page)

```
const message = msg.payload;
const date = new Date();
const time = date.toLocaleTimeString();

msg.payload = `I got your message "${message}" at ${time} !`;
return msg;
```

- Try send in a post message to `.../post2`.
- Also try sending a post message to your friend's public address.

Class Attendance

การทำเรื่องง่ายๆให้มันยาก

วิธีการเช็คชื่อ

- Send `Post` request to

`https://materials-line-oa-production.up.railway.app/prodsup`

- Payload

- `cmu_id` : your 9-digit student id
- `code` : 4-character code from the screen (ไม่เอา `CODE:`)

```
{  
  "cmu_id": "111222333",  
  "code": "xxxx"  
}
```

- Flow

- inject node
 - msg.payload

Edit inject node > **JSON editor**

Cancel Done

Edit JSON Visual editor

format JSON

```
1 {  
2   "cmu_id": "111222333",  
3   "code": "xxxx"  
4 }
```

- Add `debug` node to see the output.
 - You can inspect the error.
- Try injecting to see if the notification.

Extra

- Make a server that send the message to `Line`.
 - The message comes from the `POST` request.
